

AMENDMENTS TO THE SPECIFICATION

Please amend the specification as follows (*wherein additions are shown by underlining and deletions are shown by strikethrough*):

Please amend the paragraph beginning at page 30, line 1 as follows:

Semantic servers are ~~is~~ responsible for providing the COM classes that encapsulate the semantics being represented by a notation separate from the notation itself. In keeping with the present invention, this separation of semantics from notation enables, among other things, non-graphical clients (e.g., generators) to still be capable of accessing the semantics of the model.
